SUMMARY

Senior AI Engineer and founding-minded builder with 10+ years shipping production software and 3+ years building production AI systems — multi-agent orchestration, LLM evaluation, RAG pipelines, and AI-native products serving 100k+ users. I run agentic workflows (Claude Code, Cursor) daily and have built my own agent orchestration and governance systems. I thrive in 0→1 environments where the goal is to ship real products to real users, not tickets to a backlog.

TECHNICAL SKILLS

AI/ML: Claude API, OpenAI, LangChain, Mastra Framework, Multi-Agent Systems, RAG, Vector Databases (Pinecone), Prompt Engineering, LLM Evaluation **Frontend:** React, TypeScript, Next.js, Redux, Styled-Components, TailwindCSS, Design Systems, Performance Optimization, Storybook **Backend & Mobile:** Node.js, GraphQL, REST APIs, AWS Lambda/API Gateway/DynamoDB, Electron, React Native **Agentic Tooling:** Claude Code, Cursor, Git Worktree Orchestration, MCP, Agent Evals, CI/CD, Jest, Cypress

EXPERIENCE

HackerPug Consulting | Founder & Senior AI Engineer | Sep 2023 - Present

- Founded AI consulting practice shipping production AI systems across healthcare, media, fintech, and real estate — 6+ products delivered end-to-end to real users
- Built mobile coding-agent logic for Superset (YC-backed coding-agent IDE), extending Claude Code / Codex orchestration across isolated git worktrees ahead of their seed raise
- Architected multi-agent healthcare AI for Enter Health on Electron + Mastra — specialized agents for claims, chart review, and eligibility with sub-500ms screen-to-response latency and full HIPAA compliance
- Built agent observability and LLM evaluation dashboards for Galileo AI — visualization systems that trace multi-agent decisions and surface failure modes for production LLM workflows
- Led AI integration at Inkitt serving 100k+ users, scaling AWS serverless to 10M+ monthly API requests, cutting response latency 60% and API costs 35% through prompt engineering and batching
- architected Real Estate Lending Intelligence for Okoa Capital with conversational AI interfaces, document processing, and AI-powered deal analysis

DoorDash | Software Engineer | Jun 2021 - Feb 2024

- Designed and built DoorDash's first retail inventory management system, used by 30% of merchants to generate 100k+ product updates
- Engineered UI-as-a-Service architecture distributing packaged functionality across multiple web apps, cutting deployment time 50% and adopted by 5 internal teams
- Enabled 100k+ merchants to migrate menu data via mapping tooling I built, driving a 12% sales increase through improved catalog accuracy
- Reduced post-release bugs 75% by implementing comprehensive Jest and Cypress test infrastructure for critical merchant flows

Mothership | Senior Software Engineer | Feb 2019 - Nov 2020

- Led frontend rebuild of a logistics platform processing 50k+ monthly shipments
- Built real-time tracking dashboard with WebSocket integration for live shipment visibility

PROJECTS

Ship Commander — Agent Orchestration Desktop App

Electron + TypeScript multi-agent pipeline where specifications become source code. Separate implementer / reviewer / auditor agents, automated quality gates, structured findings with exact files and line numbers, human-in-the-loop only for requirement adherence. Discovered that fresh agents with structured feedback outperform context-preserved agents — context loss is the feature that keeps code honest.

get-spoke — Local-First Agent Governance (Rust)

Headless Rust daemon (gix, SQLite, Rig agents, deterministic CEL rule engine) that mechanically enforces pre-merge controls over autonomous coding agents. Per-agent cryptographic identity (Ed25519), tamper-evident BLAKE3 audit chain, signed reviews. Built end-to-end by directing coding-agent fleets spec-driven TDD.

EDUCATION

Carnegie Mellon University | MS, Information Systems Management | 2013 Brigham Young University | BS, Psychology | 2009
